

Dejero

256-bit AES Encryption

For Public Safety

AES/256 ENCRYPTION

Security to protect against compromise. Ensure protection of sensitive information from unauthorized use with AES256 encryption—the strongest and most robust commercially available encryption standard.

What it Does

Encrypts live UAS video transmissions from the field. It also encrypts voice communications via IFB and Intercom.

What it Delivers

Protect Sensitive Information

Live video is safe while being transmitted from the field to a Dejero receiver.

Enhance Operational Security

Protected even when transporting via a single public internet link.

Standards-based Encryption

AES256 is the gold standard in encrypting electronic data against compromise.

AES256 offers a key length of 2^{256} possible combinations. It would take a hacker longer than a human lifespan to find the correct combination that would allow them to steal your data.

Supported Devices

Transmitters	EnGo 1.3, EnGo 260
Encoders	PathWay E and EC
Receivers	WayPoint 50, WayPoint 104, WayPoint 204
Transceivers	FlexPoint 111

System Requirements

Core 5.4 Software	Contact Dejero Support to schedule an update
