SOLUTIONS FOR Police Services

Mission-critical internet connectivity and real-time video for improved situational awareness and faster response time.

More than ever, law enforcement officers rely on advanced technology to perform their mission safely and efficiently.

Transmitting real-time video and data on the frontlines requires a lot of bandwidth, and relying on a single connection or failover solution leaves officers vulnerable to network outages, coverage gaps and congestion when it matters most.

Dejero delivers uninterrupted connectivity to enhance situational awareness and critical communications.

Unlike failover or link aggregation solutions, Dejero's *Smart Blending Technology™* aggregates and manages multiple internet connections — including FirstNet® — to deliver the connection diversity, redundancy and bandwidth required for real-time video and data.

Dejero solutions work seamlessly with your existing communication systems to enhance your connection bandwidth and reliability and perform in scenarios where infrastructure has been damaged or congested. The ability to deliver low-latency, real-time video and data opens up new opportunities for your technology programs.

Bandwidth when and where you need it

Applications like real-time, high-definition video are bandwidth-intensive. When networks become congested, or bandwidth is limited in fringe coverage areas, Dejero multi-network solutions deliver where others can't.

Technology that just works

At the scene of an incident or emergency, your personnel don't need the added stress of worrying about connectivity — nor do they need to be IT experts. Dejero provides a dependable and simple solution.

Resilient wireless connectivity when it matters most

Mission-Critical Video

Dejero enables surveillance and body cameras to send high-definition tactical video in real-time to incident commanders to make smarter, faster decisions and help officers better perform their duties safely and efficiently.

Mobile Command

Mobile command vehicles give field commanders access to low-latency, real-time video and data so they can make informed decisions and respond faster. Dejero provides resilient connectivity to keep officers informed and safe on the frontlines.

UAS Situational Awareness

Dejero's mobile video solutions work seamlessly with UAS to provide high-definition, real-time video from the safety of the sky, helping incident commanders make informed decisions that save time, resources, and most importantly, lives.

A complete solution for mission-critical communication

Dejero solutions include equipment that features our *Smart Blending Technology*, connectivity services that simplify data plans, and access to Dejero's virtual network. Everything is managed in the cloud and backed by our industry-leading support.

Equipment

Ruggedized proprietary hardware. No-one builds it like Dejero.

Software

Regular remote updates of new features and performance enhancements.

Connectivity services

Enterprise-grade SIMs, flexible data plans, and simplified provisioning and billing.

Network

Dejero's virtual 'network of networks' combines diverse technologies from multiple providers.

Cloud

Set up and monitor devices, view analytics, and manage usage.

Support

Around the clock technical support by phone and email.
