

Dejero

Control

Cloud management, monitoring,
and reporting of IP video

Dejero Control is a cloud-based management system that gives you the power and flexibility to centrally manage your Dejero equipment from a web browser.

Control is an easy-to-use tool that has the ability to dramatically enhance the efficiency of your operations. It enables you to geolocate and remotely control transmitters as well as configure routers, receivers, and Cloud Servers. Use Control to view performance data, preview low-latency feeds, and route your live or recorded content to playout and online delivery workflows.

Easy to Use

We simplify the routing and sharing of live video feeds, recorded clips, and file transfers from transmitters to receivers or Cloud Servers. Content can also be routed to multiple destinations.

Extend Operations

Dejero customers can share their transmitters and receivers with each other to immediately expand their coverage of breaking news or live events.

Remote Access

Remotely control transmitters, anywhere in the world. Technicians at the broadcast facility can adjust settings and troubleshoot so your field crew can focus on getting the shot.

Analytics

Track detailed shot information across all connections with real-time live stats. Generate customized reports for further analysis.

The Choice Is Yours

To realize the full power of Control, upgrade your license to Control Enhanced.

	Standard	Enhanced
Cloud-Based Accessible from any web browser, Control is a cloud-based management system for your Dejero equipment.	●	●
Route and Share Content Route and share live video feeds, recorded clips, and file transfers from transmitters to receivers or Cloud Servers; content can also be routed to multiple destinations.	●	●
Dashboard The dashboard is the primary destination for monitoring your fleet of Dejero devices. The dashboard features a collection of widgets that display details on aggregate data usage and inventory, as well as provides tools for monitoring device status and recent activity. Enhanced Control expands the number of available widgets and adds the ability to customize the dashboard by rearranging widgets.	●	Customizable
Device Sharing Quickly and easily share your Dejero transmitters and receivers with other stations to increase your influence and content production.	●	●
Team Management Administrators can add and remove users, assign permissions, as well as invite other administrators from within the same organization.	●	●
Enhanced User Account Security Dejero Control supports two-factor authentication (2FA) and organizational user account log-in using several Single Sign-On (SSO) providers.	●	●
Software Updates Monitor available updates for your Dejero devices. Install or schedule installation of software updates for compatible devices.	●	●
Usage Reports and Notifications Up to 7 different usage reports allow you to proactively monitor your data usage and to save or export reports for further analysis. Set up email notifications to inform when device status changes, streams exceed a specified length, data usage limits are reached, or software updates are available for your fleet of Dejero devices.		●
Real-Time Geolocation Map with Preview View your Dejero transmitters and GateWays on an automatically updating device location map on the dashboard. Zoom in and click to see device details such as location, status, and more. Preview video thumbnails for live feeds.		●
Remote Control Remotely log into transmitters anywhere in the world to adjust settings or troubleshoot issues. Monitor active or recent remote control sessions with the Remote Control widget on the dashboard.		●
Grid View Of Low-Latency Thumbnails Monitor a customizable grid of low-latency video thumbnails. An expanded view provides a higher resolution and higher frame rate preview of the live feed. To go live, simply drag and drop the source feed to the desired destination.		●
Analytics & Health Monitoring Track details on all active network connections with real-time status indicators. View live stream health analytics and browse historical stream lists for all transmitters in your fleet.		●
View Return Video And Teleprompter Feeds (Dejero CuePoint required) View return video and teleprompter feeds from the studio. Generate URL links for easy browser access of return feeds for field operations or shared access.		●
API Access Programmatically interface with Dejero Control from 3rd party applications via RESTful API. Customers with a standard license can optionally pay us for API access when they have standard licenses.	Available as add-on	●
