# Dejero

MultiPoint

IP video distribution network for simplified content sharing

Built for scalability, and managed in the cloud, MultiPoint allows you to distribute live content from any location, to any location, at any time.

MultiPoint is a video distribution network by Dejero that simplifies the sharing of high-quality, low-latency, real-time video feeds using existing Dejero equipment.

MultiPoint leverages public Internet infrastructure to simplify global distribution and features adaptive bitrate encoding technology to minimize bandwidth requirements.

GLOBAL

INSTANTLY SHARE

SCALABILITY

SAVINGS

GLOBAL DISTRIBUTION

Route content to any location with a Dejero WayPoint receiver or FlexPoint transceiver, or to a Cloud Server for online distribution.

SIMPLIFIED CONTENT SHARING

Easily and instantly share live and on-demand content simultaneously across your organization or with third parties without satellite provisioning or dedicated fiber networks.

FLEXIBLE AND SCALABLE

Ubiquitous availability of Internet connectivity and inherent scalability of cloud-based infrastructure gives you ultimate flexibility.

COST EFFECTIVE

Using public Internet infrastructure is more affordable and faster to deploy than a private network.

MULTIPOINT PACKAGES

UNLIMITED

TYPICAL CONFIGURATION	MultiPoint-to-MultiPoint
DEJERO NETWORK USAGE	Unlimited
MAXIMUM OUTPUTS	Customized (hundreds possible)
COMMITMENT	Annual subscription

GROUP

TYPICAL CONFIGURATION	Point-to-MultiPoint
DEJERO NETWORK USAGE	3TB/month
MAXIMUM OUTPUTS	15
COMMITMENT	Annual subscription

EVENT

TYPICAL CONFIGURATION	Point-to-MultiPoint
DEJERO NETWORK USAGE	3TB/month
MAXIMUM OUTPUTS	15
COMMITMENT	Month-by-month subscription

KEY FEATURES

- Integration with IP infrastructure and workflows
- Adaptive bitrate encoding
- Advanced filtering and searching of sources and destinations
- Hundreds of low-latency live previews
- Drag and drop routing
- Multichannel audio with 2, 4, or 8 inputs
- Closed captioning: CEA-708-B and SMPTE 334-2000 compliant
- Content sharing with third-party media entities
- Content pooling by sharing live feeds
- Leverage user-generated content
- Geolocate field units, preview feeds, route content, and monitor usage and performance using our cloud-based management system

HOW MULTIPOINT WORKS

1. Receive content from any Dejero transmission source and assign to MultiPoint server.

2. Preview the feed in Control from a web browser and select the destinations.

3. Click "Go Live" and your content is instantly distributed. It's that simple.

- - - - - SOURCE STREAM
————— DESTINATION STREAMS

MANAGE

1. Preview and monitor content
2. Manage sources and destinations
3. Accessible from any web browser

SOURCES

1. Dejero transceivers
2. Dejero transmitters
3. SDI Feed

DESTINATIONS

1. Dejero transceivers
2. Dejero receivers
3. Dejero Cloud Server
