

# Dejero

## Guest Return Video

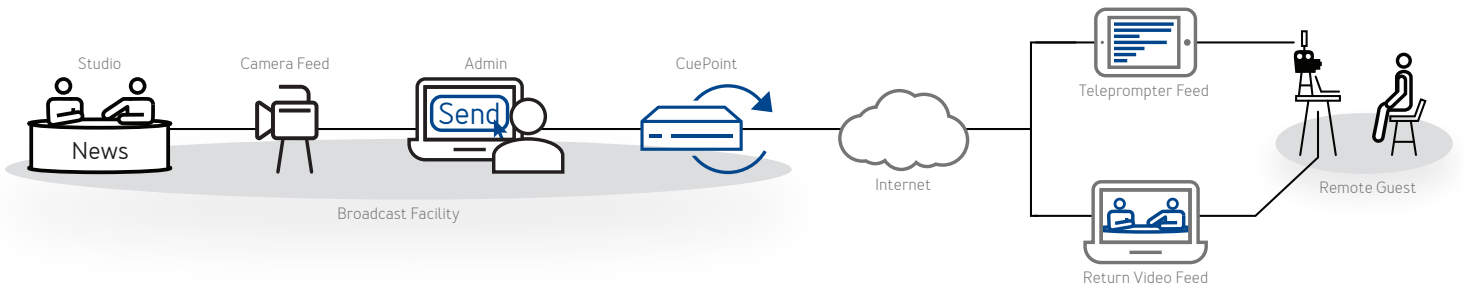

For Broadcast and Media

Broadcasters want seamless synchronization and coordination with guests and journalists in the field. This feature provides studio-quality return video and teleprompting feeds to remote guests and field crews with one simple click.

### What it Does

Provides low-latency return-video and/or teleprompter access for guests, on-air talent, and VIPs in a simple link, viewable on any device with a web browser.

### What it Delivers

#### No administrative hurdles

Administrators don't need to set up and grant access to Dejero Control for multiple users. And for easier management and security, links can be sent to up to 8 outputs with the choice of permanent link or automatic link expiration.

#### Fast and easy access for guests

Guest talent, field crews, or anchors working from home can simply click the provided link to open a return feed without requiring login credentials to Dejero Control.

#### Easily viewed on any device

To support a high-quality broadcast remotely, users can access return video and/or teleprompter feeds on any device with a web browser, including smartphones, tablets, and computers.

Latency for return video feeds via CuePoint is as low as 250 milliseconds, critical to preventing pauses or breaks in live programming.

#### Supported Devices

Return Servers CuePoint 50, CuePoint 100

#### System Requirements

Dejero Control Dejero cloud-based management system
